Professional Summary

Frontend Engineer specializing in React.js and TypeScript, with hands-on experience owning and shipping production features in a fast-paced startup environment. Comfortable driving modules end to end – from architecture and state management to API integration, performance optimization, and observability. Product-minded and ownership-driven, with a track record of delivering scalable, maintainable, and user-focused interfaces while collaborating across engineering, backend, and QA teams.

Education

AdiKavi Nannaya University, Bachelor of Science in Computer Science

Jun 2021 – May 2024

- **Relevant Coursework :** Data Structures and Algorithms, Web Technologies (HTML, CSS, JavaScript), Database Management Systems (DBMS), Object-Oriented Programming (OOP) in Java

Core Skills & Technologies

Frontend: React.js, TypeScript, JavaScript (ES6+), HTML5, CSS3, Next.js

Styling & UI: Tailwind CSS, Bootstrap, Material-UI, Responsive Design

State Management: Redux, Context API

Data & Integration: REST API Integration, Axios, Real-Time Communication (LiveKit), Data Visualization

Observability & Deployment: HyperDX, Vercel (CI/CD), Netlify

Tools & Workflow: Git, GitHub, Jira, Figma, Agile / SDLC, AI-Assisted Development (Claude, Cursor, ChatGPT, GitHub Copilot)

Professional Experience

Frontend Engineer (Full-Time) , Deccan AI – Hyderabad

Nov 2025 – Present

- Owned the AI Interview module end to end across both admin and user-facing surfaces, architecting the frontend and integrating real-time agent communication (LiveKit) to deliver live, interactive interviews.
- Scaled the AI Interview experience to reliably support growing interview volume, prioritizing performance and production stability.
- Built and shipped a Referral Campaigns feature that lets users refer candidates to specific project roles on the annotation platform, expanding candidate sourcing.
- Led multiple refactors across the platform, including the Assessments platform and other internal admin tooling, improving performance, maintainability, and code quality.
- Refactored the Campaign Manager (email campaigns) and push notification systems for greater reliability and maintainability.
- Built multiple CSV uploaders for internal admin tooling, streamlining bulk data ingestion for operations teams.
- Integrated HyperDX for frontend observability, enabling real-time monitoring and faster debugging of production issues.

Frontend Engineer (Intern) , DigiDxDoc – Koramangala, Bengaluru

Apr 2025 – Oct 2025

- Delivered features across the Pathology, Radiology, and Alertr platforms, building dynamic, permission-driven UI adapted to multiple user roles.
- Shipped multi-level filtering (priority, gender, date range, text search) to make large clinical datasets navigable.
- Built organization and facility management modules with full CRUD API integration, including bulk operations (multi user/facility delete) and organization-assignment workflows.
- Integrated APIs for role management and case monitoring, and ensured backend payload consistency (FormData to JSON) with correct default-value handling.
- Optimized UI responsiveness and cross-device compatibility, and implemented role-based rendering to secure sensitive workflows.
- Debugged and resolved critical production issues (file upload failures, TAT mismatches, notification errors) and collaborated with backend and QA teams, authoring detailed test-case sheets and supporting client demos.
